TRAJECTORY & INITUS: THE AI-POWERED DYNAMIC DUO FOR NETSUITE TEAMS

THE TRAJECTORY ADVANTAGE

Selling NetSuite instances is only the first step. For our clients, the real challenge is making the system of financial truth (NetSuite) talk seamlessly to systems of customer truth (like Salesforce and other CRMs), and other business systems, ensuring a rapid, successful go-live.

When implementations or integrations drag on, user adoption and platform trust suffers. Trajectory is the elite technical execution engine that de-risks complex Quote-to-Cash and ERP projects, making NetSuite indispensable.

Our secret weapon? A purpose-built AI backbone to drastically reduce implementation risk and accelerate time-to-value.

OUR CORE AI BACKBONE: INITUS SUITE

We use Initus Solutions (initus.io) to supercharge NetSuite workflows with AI automation and 18+ years of built-in expertise:

- **InitusMigrate** (Data Migration): De-risks one of the highest-effort, highest-risk phases of an ERP go-live, reducing data migration timelines by up to 38% and ensuring clean, compliant system launches.
- **InitusIO** (Integration Solution): Connects NetSuite with CRMs (Salesforce), e-commerce (Shopify), and custom Third-Party systems, dramatically accelerating what would traditionally require complex, custom SuiteTalk/REST API development.
- **InitusIDP** (Intelligent Document Processing): Automatically extracts data from client documents (SOWs, Purchase Orders, Contracts, Supplier Invoices) and creates the related system records in NetSuite. A recent client example ([Zochem](#)) achieved 90% order automation with a rapid 12-week ROI.
- **InitusCerebro** (AI Readiness & Discovery): Maps AI use cases to client-specific workflows to maximize scoping accuracy. It automates configuration documentation, SuiteScript drafting/review, process mapping, and SOW analysis.
- **Claude - Consultant Force Multiplier**: In addition to Initus, Trajectory integrates Claude (Anthropic) into our Consultants' daily duties, becoming an efficiency multiplier.

PROVEN OUTCOMES & PARTNER VALUE

1. Meaningful Cost & Hours Reduction

By weaving Initus solutions into our methodology, Trajectory has delivered a blended **20% - 30% reduction in total delivery hours** across a standard NetSuite implementation. For complex integrations or heavy document-processing environments, savings trend toward the higher end of that range.

2. Accelerated Deal Velocity & Commissions

We provide pre-deal technology diligence and [unified backbone blueprints](#). By helping clients visualize exactly how business rules operate (e.g. pre-sale gating in Salesforce vs. post-sale compliance in NetSuite), we remove the technical friction that stalls partner contracts.

3. Eliminated Errors & Improved Operational Efficiency

We ensure the 'messy middle', where CRM data hits the financial ledger, is fully automated and error-free. Results include:

- **42% Decrease** in monthly data entry errors.
- **27% Faster** invoicing cycles.
- **Merger & Acquisition Readiness:** Fast-tracked onboarding of new entity acquisitions into the integrated stack.

WHEN TO INVOLVE TRAJECTORY

- **The Integration Scrutiny Phase:** When a CFO or CTO asks, "How exactly will this sync with our CRM or existing platform infrastructure?"
- **Complex Quote-to-Cash Requirements:** If a deal involves complex revenue recognition/allocation, multi-currency, or high-volume billing.
- **Rescue Missions:** When a client has a fragile existing integration that is actively blocking upgrades to their NetSuite SKU list.
